

Toy competition, metric: Unifrac

Toy competition, metric: L1norm

significance level 90%, 1 iterations for the following background models:

— true number of species, drawn from all 328832 bacterial species in NCBI, abundances from log-normal($\mu=1.0, \sigma=2.0$)

— true number of species, drawn from all ever predicted species (6848), abundances from log-normal($\mu=1.0, \sigma=2.0$)
— true strains true but shuffled abundances

true strains, true but shuffled abundances
